

# Preventing Mower Fires

- Blow off all mowers several times during the day.
- Never put a mower back into a truck or trailer with out the leaves and debris being blown off of the deck, engine and belt housing. If not done, it could lead to additional equipment fires and damage.
- During leaf season, while mulching, these leaves will get caught under the deck and around the belt housing and with the friction of the belts, can cause significant heat and fire.
- Remember to also let mowers cool down for 5 minutes before refueling.
